About Me

Python Developer with AWS Solutions Architect and Developer Associate certifications and two production systems running on AWS: a Flask application on EC2 that I re-architected to cut costs by 83%, and a fully serverless image pipeline defined in Terraform and deployed through CI/CD. Former independent nurse: I bring ownership, calm under pressure, and the habit of verifying instead of guessing. Currently expanding into AI and Kubernetes.

Languages

- Dutch – Native
- English – Fluent
- French – Intermediate

Skills

- Cloud & DevOps: AWS hands-on (EC2, S3, IAM, VPC, RDS, DynamoDB, Lambda, Step Functions, API Gateway, EventBridge, CloudFront, Route 53, SNS, Rekognition, CloudWatch, CloudFormation), Terraform, GitHub Actions (CI/CD, OIDC), Docker
- Systems: Windows, Microsoft 365 (Word, Excel, Teams, SharePoint, Outlook), Linux (Amazon Linux)
- Programming: Python (Flask, boto3, pytest), JavaScript, HTML/CSS, Bash, PowerShell
- Databases: SQL (MySQL, SQLite), DynamoDB
- Data & AI: NumPy, Pandas, Matplotlib, Seaborn, Google Colab, LLMs, GitHub Copilot, Claude Code

Projects

- Serverless Media Pipeline – Terraform & CI/CD**
Event-driven image pipeline on API Gateway, Lambda, Step Functions, Rekognition and DynamoDB. Infrastructure fully defined in Terraform; deployed via GitHub Actions with OIDC (no stored AWS keys). Includes rate limiting, content moderation, and an AWS Budgets circuit breaker.
<https://media.martinscloud.be>
- AWS Infrastructure Migration – Cost Optimisation**
Migrated a production AWS stack from us-east-1 to eu-west-3 (Paris), simplifying the architecture (RDS → SQLite, removal of ALB/ASG, ACM → Let's Encrypt). Achieved 83% cost reduction with zero downtime and implemented automated S3 backups.
<https://martinscloud.be>
- Interactive Blog Platform – AWS Deployment**
A full-stack Flask app with authentication, CRUD posts, comments, and an AWS RDS database, deployed in a custom VPC (CloudFormation) on EC2, backed by an Auto Scaling Group, ALB, and Route 53.
<https://martinscloud.be/blog>
- Flask Blackjack App – AWS Deployment**
Developed a Python-based Blackjack game as a Flask web application. Deployed on AWS Elastic Beanstalk with custom domain via Route 53 and HTTPS via ALB.

Certification & Education

- AWS Certified Developer – Associate** 2026
Serverless development (Lambda, API Gateway, DynamoDB), CI/CD (CodeDeploy), event-driven architecture (SQS, SNS), application security (KMS, Cognito)
- AWS Certified Solutions Architect – Associate** 2025
Cloud architecture and well-architected design, AWS data services (S3, RDS), networking and security (VPC, IAM), infrastructure automation (CloudFormation), HA & DR
- Tech Fundamentals - Learn.cantrill.io** 2025
Networking (OSI, DNS, TCP/IP, firewalls), encryption and security principles, virtualisation and containers, observability, backup and disaster recovery
- Docker Fundamentals - Learn.cantrill.io** 2025
Containerisation, image and container management, Dockerfile, deployment and container networking
- 100 Days of Code - Angela Yu - Udemy** 2024 - 2025
Python programming, automation, REST APIs, data manipulation with Pandas

Work

- Founder & Independent Nurse | Home Care** 2019 - present
Running my own nursing practice, treating patients at home with full responsibility for medical care and operations. Built trusted relationships with clients and families, ensuring personalized, high-quality care. Managed administration, scheduling, and compliance, demonstrating independence, adaptability, and business ownership skills.
